### **Capital adequacy ratio**

The Group calculated capital adequacy ratios in accordance with the *Capital Rules for Commercial Banks (Provisional)*, promulgated by China Banking Regulatory Commission in June 2012, and commenced to implement the advanced measurement approaches for capital management from 2 April 2014. The capital requirements of corporate credit risk exposure that meet regulatory requirements are calculated with the foundation internal rating-based approach, the capital requirements of retail credit risk exposure are calculated with the internal rating-based approach, the capital requirements of market risk are calculated with the internal models approach, and the capital requirements of operational risk are calculated with the standardised approach. Pursuant to the

regulatory requirements, the Group calculates capital adequacy ratios simultaneously with advanced capital measurement approaches and other methods, and complies with the relevant requirements for capital floors.

As at 31 March 2016, considering relevant rules in the transition period, the Group's total capital ratio, tier 1 ratio and common equity tier 1 ratio, which were calculated in accordance with the *Capital Rules for Commercial Banks (Provisional)*, were 15.55%, 13.65% and 13.46% respectively, and were in compliance with the regulatory requirements. The total capital ratio, tier 1 ratio and common equity tier 1 ratio increased by 0.16, 0.33 and 0.33 percentage points respectively compared with those as at 31 December 2015. The increases in the Group's capital adequacy ratios were mainly because the growth rate of the total capital after deductions accumulated from profit outpaced that of risk-weighted assets.

### **Leverage ratio**

As at 31 March 2016, the Group's leverage ratio calculated in accordance with the *Measures for the Administration of the Leverage Ratio of Commercial Banks (Revised)* was 7.27%, which was in compliance with the regulatory requirements.

During the transition period, such ratio shall reach 80% and 90% by the end of 2016 and 2017 respectively.

In the first quarter of 2016, the Group's average monthly liquidity coverage ratio was 133.09%, up by 0.18 percentage points over last quarter. The increase in the Group's average monthly liquidity coverage ratio was mainly because the qualified and high-quality liquid assets increased while the non-business relations deposits of unsecured (unpledged) wholesale financing decreased. The qualified and high-quality liquid assets of the Group mainly include securities guaranteed and issued by sovereign states and central banks with the risk of zero or 20%, and the available deposit reserve in the central bank under stress circumstances.
